This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A cleaning composition for cleaning exterior surfaces of a vehicle, said cleaning composition comprising a liquid when applied to said surfaces, said composition having a pH within a neutral range, and consisting essentially of ~~a single essential ingredient, comprising~~ a surface substantive ~~polymer~~ copolymer, ~~wherein said composition further comprises~~ a nonionic surfactant, water, a pH buffer or mixture thereof, perfume, dye, and a preservative, and wherein said ~~polymer~~ copolymer modifies at least a portion of an exterior surface of a vehicle to render it hydrophilic, providing a contact angle between water and the surface of less than 50°.

2. (Currently Amended) The cleaning composition of Claim 1 wherein said ~~polymer~~ copolymer durably modifies said at least a portion of the exterior surface of said vehicle.

3. (Currently Amended) A cleaning composition according to Claim 2 wherein said ~~polymer~~ copolymer is capable of adhering to the surface for at least three rinses that each involve spraying the surface with water having 24 French degree hardness at a distance from the surface of 1.0 meter for 30 seconds at a flow rate of 10 liters per minute.

4. (Currently Amended) A cleaning composition according to Claim 2 wherein said ~~polymer~~ copolymer is capable of adhering to the surface for at least five rinses that each involve spraying the surface with water having 24 French degree hardness at a distance from the surface of 1.0 meter for 30 seconds at a flow rate of 10 liters per minute.

Claims 5-6 (canceled) (without prejudice)

7. (Currently Amended) A cleaning composition according to claims 1 or 2 wherein the ~~polymer~~ copolymer comprises at least one hydrophobic or cationic moiety and at least one hydrophilic moiety.

8. (Currently Amended) A cleaning composition according to claims 1 or 2 wherein the ~~polymer~~ copolymer is present at a level of from about 0.001% to about 10% by weight of the composition.

Claims 9-15 (Canceled) (Without prejudice)

16. (Previously Presented) A process for cleaning at least a portion of an exterior surface of a vehicle, said process comprising optionally pre-rinsing at least a portion of an exterior surface of a vehicle, applying the composition according to claim 1 to said at least a portion of the surface, and allowing the composition to dry naturally.

17. (Original) A process according to claim 16 wherein the surface is rinsed prior to allowing the surface to dry naturally.

18. (Original) A process according to claim 16 wherein the composition is applied onto the surface using a spraying device.

19. (Previously Presented) A cleaning composition according to claims 1 or 2 which has a pH between 4.0 and 9.0.

20. (Currently Amended) A method for cleaning at least a portion of the exterior surface of a vehicle, said method comprising:

a step of applying a cleaning composition to at least a portion of the exterior surface of a vehicle, said cleaning composition having a pH within a neutral range and ~~comprising~~ consisting essentially of ~~a single essential ingredient, comprising~~ a surface substantive ~~polymer~~ copolymer, ~~wherein said composition further comprises~~ a nonionic surfactant, water, a pH buffer or mixture thereof, perfume, dye, and a preservative, ~~and~~ wherein said ~~polymer~~ copolymer modifies said at least a portion of the exterior surface of the vehicle to render the portion of the surface hydrophilic, providing a contact angle between water and the portion of the surface of less than 50°.

21. (Currently Amended) The method of Claim 20 wherein said ~~polymer~~ copolymer durably modifies the portion of the surface.

22. (Currently Amended) A method according to Claim 21 wherein said ~~polymer~~ copolymer is capable of adhering to the surface for at least three rinses that each involve spraying the surface with water having 24 French degree hardness at a distance from the surface of 1.0 meter for 30 seconds at a flow rate of 10 liters per minute.

23. (Currently Amended) A method according to Claim 21 wherein said ~~polymer~~ copolymer is capable of adhering to the surface for at least five rinses that each involve spraying the surface with water having 24 French degree hardness at a distance from the surface of 1.0 meter for 30 seconds at a flow rate of 10 liters per minute.

24. (Previously Presented) A method according to Claim 20 wherein the composition is applied onto the at least a portion of the surface using a spraying device.

25. (Previously Presented) A method according to Claim 20 wherein the composition is applied onto the at least a portion of the surface using a cloth or sponge.

26. (Previously Presented) A method according to Claim 20 wherein the composition is applied onto the at least a portion of the surface by pouring.

27. (Previously Presented) A method according to Claims 20 or 21 wherein the composition has a pH between 4.0 and 9.0.

28. (Currently Amended) A method according to Claims 20 or 21 wherein the ~~polymer~~ copolymer comprises at least one hydrophobic or cationic moiety and at least one hydrophilic moiety.

29. (Currently Amended) A method according to Claims 20 or 21 wherein the ~~polymer~~ copolymer is present at a level of from about 0.001% to about 10% by weight of the composition.

Claim 30 (Canceled) (Without prejudice)
